3: Cooking with pulses

Primary Schoolchildren – Ages 8-11

Aims:
To prepare a nutritionally balanced meal / snack with pulses.

Objectives:
• Students will plan the steps required to create a pulse-based meal or snack.
• Students will prepare, and eat a pulse-based meal or snack.
• Students will promote the benefits (nutritional or otherwise) of their chosen meal.

Resources:
1. Risk assessment (from teacher pack) – cooking with students.
2. A selection of recipe cards (from teacher pack).
3. Cookery planning sheet (from teacher pack).
4. Take home sheets (from teacher pack).

Suggestions for further development:
• The lesson provides a perfect opportunity for students to take home the message of the role pulses can play in a healthy diet. Along with the recipe cards, the ‘take home sheet’ in the resource pack will allow families to engage in discussion about how they can incorporate pulses into their diet at home. Students could be encouraged to cook for their families at home and share a pulse based meal.

• Get the students to ‘plate up’ and take pictures of their food, with the best being submitted to the School Newsletter (including the recipe) to promote healthy eating.

• Regular cookery lessons could be built into the curriculum using pulses and other foods to promote the idea of healthy eating.

• Class to visit a local supermarket to look for / buy products that have pulses in their ingredients. Followed up by a classroom taste-test.

• Alternative recipes can be found at www.pulses.org. Consider selecting a recipe that uses a pulse ingredient grown locally so that the farmer’s story can be discussed in class.

<td>Teacher gives out recipe cards (resource 2) to different groups. Teacher can differentiate this task by ensuring that recipe cards match the ability level of the group. Ask the pupils what they think are the main safety considerations that need to be highlighted when cooking. Outline key rules that pupils will have to adhere to during the lesson (use risk assessment (resource 1) as a guide – focus on the use of knives/graters). Pupils using the cookery-planning sheet (resource 3) plan how they will carry out the cooking task – assigning jobs to specific members of the group.</td>

International Year of Pulses

What is IYP?
On December 21st 2013, the General Assembly of the United Nations in New York voted to proclaim the International Year of Pulses 2016 (IYP). This is the culmination of almost two years of work by members of the voluntary Executive Committee of the global pulse industry body, CICILS IPTIC. The aim is to raise the profile of pulses within the Food and Agriculture Organisation of the UN (FAO).

PULSES AND FOOD SECURITY
In most developing countries, pulses play a fundamental role as a low-fat, high fibre source of protein, an essential component of traditional food baskets. Pulses, by contributing about 10 percent in the daily protein intake and 5 percent in energy intake, are of particular importance for food security in low income countries where the major sources of proteins are non-animal products. In addition, pulses contain significant amounts of other essential nutrients like calcium, iron and lysine. Pulses are included in all ‘food baskets’ and dietary guidelines.

Pulses and a Balanced Diet
Pulses include beans, lentils and peas. They are a cheap, low-fat source of protein, fibre, vitamins and minerals, and they count towards your recommended five daily portions of fruit and vegetables.

What Are Pulses and Why Are They Important?
Pulses, also known as grain legumes, are a group of 12 crops that includes dry beans, dry peas, chickpeas and lentils. They are high in protein, fibre and various vitamins, provide amino acids and are hearty crops. They are most popular in developing countries, but are increasingly becoming recognized as an excellent part of a healthy diet throughout the world.

Zero Hunger Challenge
Pulses play an important role in the Zero Hunger Challenge, as they are carbohydrate and protein rich source of calories.

The challenge of Zero Hunger means:
1. Zero stunted children less than 2 years old
2. 100% access to adequate food all year round
3. All food systems are sustainable
4. 100% increase in smallholder productivity and income
5. Zero loss or waste of food
